Figure 1 consists of 12 bar charts, labeled (a) through (l), each representing a different variable. The x-axis for all charts is divided into two main sections: '1994' and '1998'. Within each year section, there are four bars representing different demographic groups: 'Male', 'Female', 'White', and 'Black'. The y-axis for all charts represents the percentage of respondents, ranging from 0 to 100. The variables measured are: (a) Age, (b) Sex, (c) Education, (d) Income, (e) Marital status, (f) Employment status, (g) Political affiliation, (h) Party affiliation, (i) Religious affiliation, (j) Attitude towards gay and lesbian people, (k) Attitude towards AIDS, and (l) Attitude towards HIV. The charts show how the distribution of responses for each variable changed between 1994 and 1998, and how these changes varied by gender and race.
